

PRATHYUSHA VARANASI

Infrastructure & DevOps Engineer | Cloud, IaC & Kubernetes

prathyushavaranasi4@gmail.com | +1 470-841-3000 | Open to Relocate

PROFESSIONAL SUMMARY

Infrastructure and DevOps engineer with 3+ years of experience spanning cloud platforms and production systems, seeking to grow into hybrid on-premises and cloud environments. Hands-on with Terraform and Ansible for Infrastructure as Code, AWS core services (EC2, VPC, IAM, S3), and Kubernetes cluster operations. Strong Linux systems administration background with Python and Bash scripting for automation. Experienced troubleshooting production issues end-to-end, from root cause investigation to implementing fixes that prevent recurrence. Comfortable working cross-functionally in fast-paced environments and eager to build deeper expertise in physical infrastructure and networking under senior engineer mentorship.

TECHNICAL SKILLS

Infrastructure as Code: Terraform, Ansible, CloudFormation, Packer, Kubernetes Manifests

Cloud Platforms: AWS (EC2, VPC, IAM, S3, CloudWatch), Azure, Google Cloud Platform (GCP)

Containerization & Orchestration: Kubernetes, Docker, Amazon EKS, Docker Swarm

Networking: TCP/IP, DNS, VPN, VLANs, Firewalls, Load Balancing, VPC, Subnetting, Routing, Network Security Groups

Linux Administration: Ubuntu, CentOS, Red Hat, file systems, process management, bash scripting

Scripting & Automation: Python, Bash, Shell Scripting

CI/CD: Jenkins, GitLab CI, GitHub Actions, CircleCI

Monitoring & Observability: Prometheus, Grafana, Datadog, ELK Stack (Elasticsearch, Logstash, Kibana), CloudWatch

Security & Access Management: IAM, RBAC, Secrets Management, SSL/TLS, Vulnerability Scanning, Patch Management

WORK EXPERIENCE

UT Health Houston, Texas

Jan 2025 - Present

Cloud Security Engineer

- Wrote and maintained Terraform and Ansible modules to provision and configure AWS infrastructure, reducing manual configuration effort by approximately 30%.
- Investigated and resolved an average of 10-15 production incidents per month, including memory leaks and connection pool inefficiencies, contributing to a 25% reduction in mean time to resolution.
- Managed IAM policies, security groups, and RBAC configurations across 6 AWS accounts to enforce least-privilege access.
- Built and maintained Prometheus and Grafana dashboards covering 20+ services, improving incident detection time by approximately 25%.
- Applied security patches and vulnerability remediations on a monthly cadence across 50+ production systems to support security and compliance requirements.
- Developed Python and Bash automation scripts that eliminated approximately 6-8 hours of manual operational work per week.
- Participated in an on-call rotation supporting production services and contributed to maintaining 99.9% service availability.
- Created and maintained 15+ runbooks and operational procedures to improve incident response and knowledge transfer.

Wells Fargo, India

Nov 2022 - Jul 2023

DevOps Engineer

- Provisioned and configured 50+ cloud-based servers using Terraform and Ansible, improving infrastructure consistency across development and production environments.
- Maintained CI/CD pipelines using Jenkins, GitLab CI, and GitHub Actions supporting 20+ deployments per week and reducing deployment failures by approximately 20%.
- Troubleshoot network connectivity issues involving VPC configurations, security groups, DNS, and firewall rules, resolving more than 85% of assigned tickets within SLA.
- Operated Kubernetes clusters supporting 30+ microservices, including deployments, scaling, troubleshooting, and resource management.
- Built Python automation scripts to streamline configuration management and provisioning workflows, reducing manual provisioning time by approximately 30%.
- Configured monitoring and alerting using Prometheus, Grafana, and Splunk, reducing false-positive alerts by approximately 20%.

Infosys, India

Aug 2021 - Oct 2022

Cloud Engineer

- Deployed and maintained infrastructure for 10+ client environments across AWS, Azure, and GCP.
- Configured servers and performed OS-level troubleshooting for 40+ Linux systems under senior engineer guidance, building hands-on experience with server provisioning and infrastructure operations.
- Wrote Bash and Python scripts to automate routine operational tasks, saving approximately 5-6 hours of manual work per week.
- Performed system profiling and performance tuning, improving application response times by approximately 15%.
- Maintained infrastructure documentation and configuration records for 20+ production and staging environments.

EDUCATION

Master's in information technology - Belhaven University
